To whom it may concern

Letter of reference: Pinnacle Projects

Dear Reader,

Pinnacle Projects steel detailers have been exemplary in their supply and delivery of the Flue gas ducting detailing for Medupi and Kusile PowerStation's. Pinnacle Project's scope included:

Steel detailing:

Together with the project team Pinnacle Projects established exactly how their detailing deliverables would be delivered. Their data packs were clear concise and value adding to the project. Their efforts made it easier for procurement, QA and QC as well as fabricating in the workshops. Furthermore the method used for detailing allowed flexibility to management. Management could easily breakup parcels of ducting plate work and issue to many fabricators without compromising control at all. Their entire system is electronic.

Change Management of data packs:

Pinnacle Projects skill for managing the change management has been unparalleled. They have with ease controlled the change management of the ducting detailing drawings. What was a major challenge to other detailers seemed to be a breeze for this outfit.

Summary:

This team consisting of no more than 3 people using Tekla structures delivered more than 120 000 drawings weighing 29 894 tons together with all the relevant control lists and NC data over an 18 month window, which included a visit with the Hitachi designers in Duisburg Germany. Their performance and professionalism was phenomenal. Their work methodology sets the new benchmark in building information management/modeling. I would recommend this team to any company local or international without reservation.

Kind regards

Charles Naude
