To who is may concern

**Letter of reference : Pinnacle Projects**

Dear reader,

This letter serves to confirm that Pinnacle Projects has been engaged to supply modelling and detailing services for ducting work on the Medupi and Kusile Power station projects during the period February 2010 to date.

The initial allocated scope of work was limited to System 7.5. Due to the company's performance and quality of work produced the scope of work were subsequently increased to include the following duct systems:

System	Mass (Tons) Per unit	Total (Tons) (12 Units)
System 1.1 Cold air Suction – FDF	173	2076
System 1.2 Cold air FDF to Airheater	175	2100
System 2.0 Hot air - Collecting line - Airheater to Distributor	306	3672
System 3.0 Hot air Distribution line - Distributor	153	1836
System 6.1 Mill Hot Air - Airheater to Mill	182	2184
System 6.2 Mill Hot Air - Airheater to Mill	173	2076
System 7.5 ID Fan to Chimney	2930	2930
System - Coal Bunkers	1085	13020
Total	5177	29894

As a general comment Pinnacle projects has displayed an incredible work ethic, consistently met or bettered agreed deadlines, produced accurate data-packs enabling the fabricators and construction crews to work more efficiently, were always in total control of change and configuration management and were a pleasure to deal with.

Kind regards

Tiaan van Coppenhagen  
Engineering Manager  
Medupi & Kusile Projects
